

# Using the APX The Compliance Engine (TCE) Integration for SmartMAP

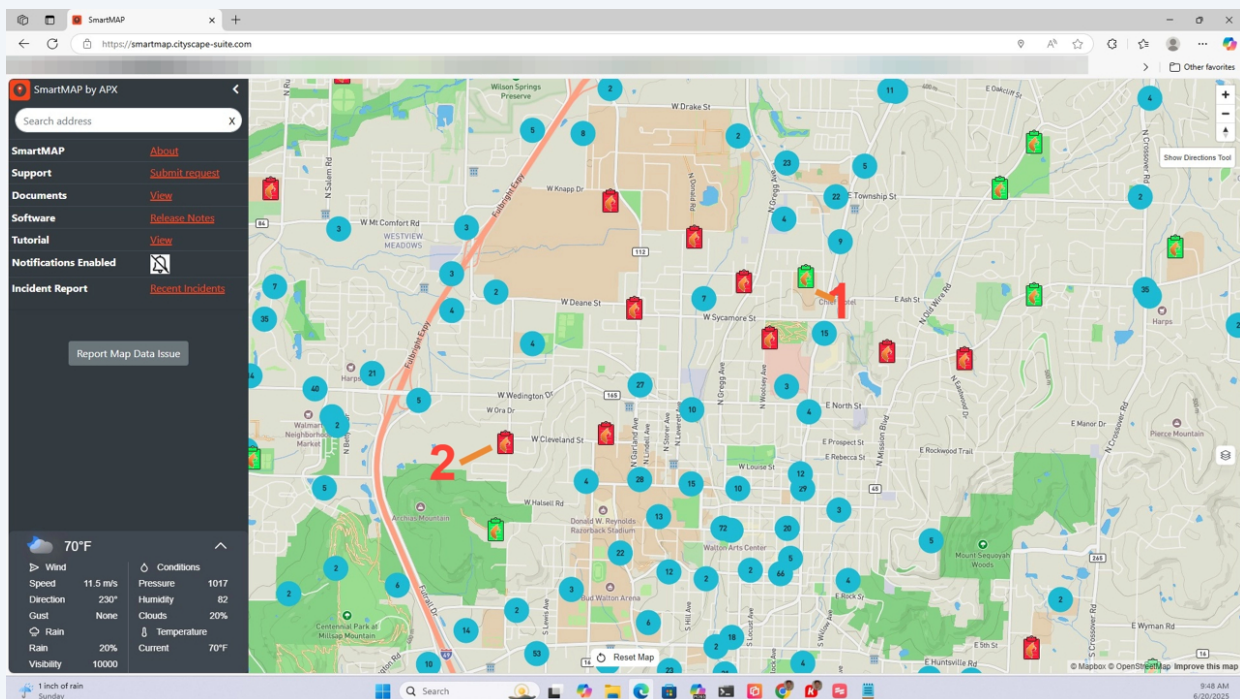

1

If the TCE Integration for SmartMAP is enabled, locations with system reports will be identified with a TCE icon.

1. A green TCE icon indicates a location where all listed systems are compliant, and all systems are up to date with inspections.

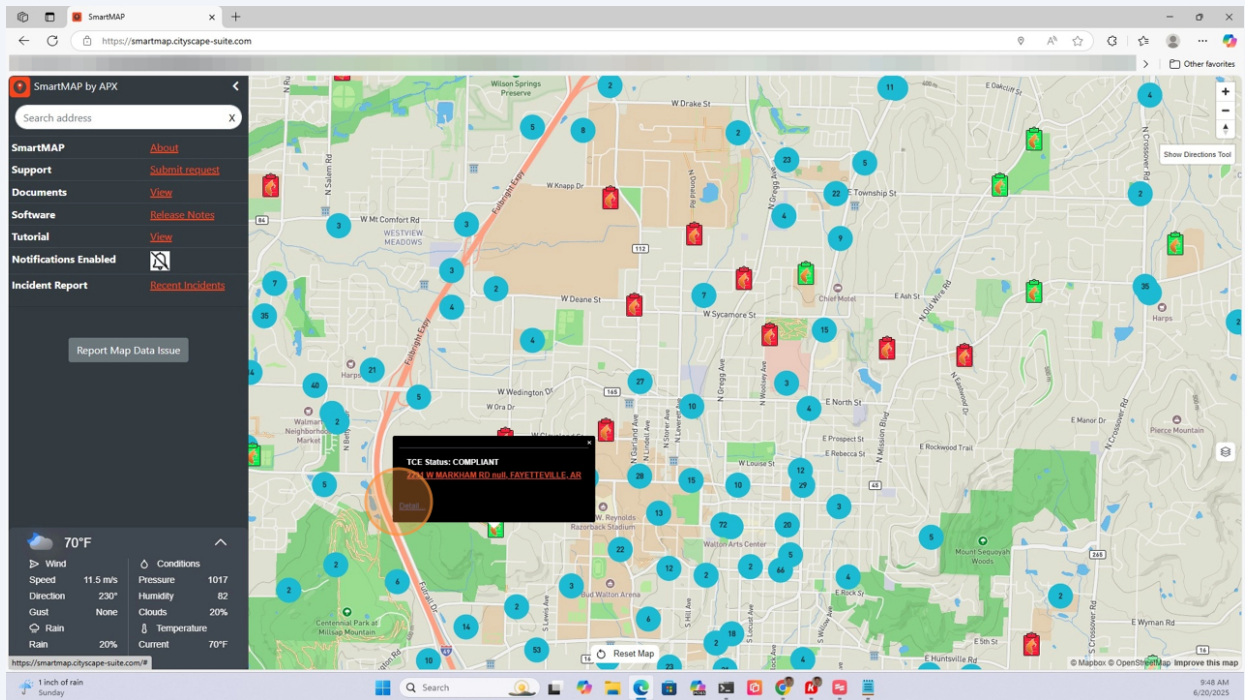

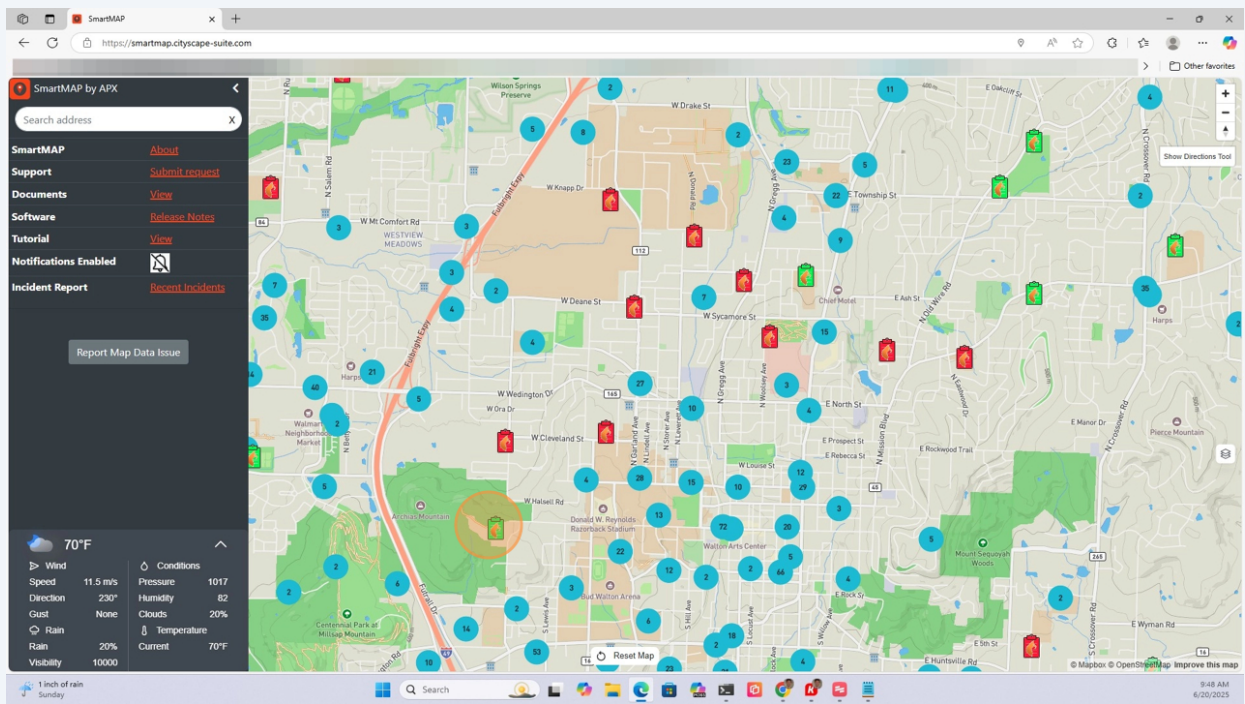

2. A red TCE icon indicates a location where one or more systems are non compliant, or one more systems are past due for inspection.

2

Select a TCE icon to view the address and overall status of a location. Select **Detail** to view system(s) information, or the displayed address to launch directly to TCE.

Within the Details view, you can review specific system(s) status, and also link to TCE for the specific report on that system.
