

SmartCapture iOS - Adding a Floor Plan

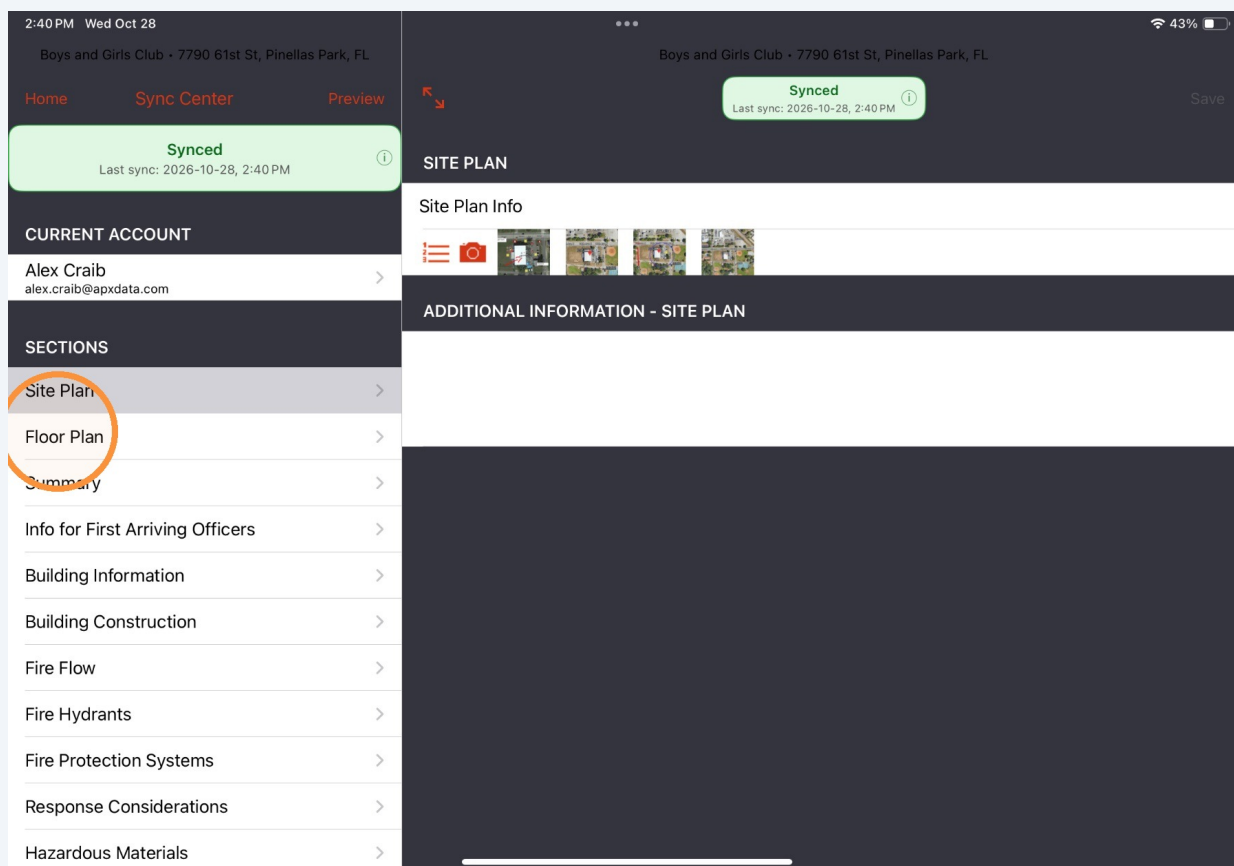

1 Tap here.

2

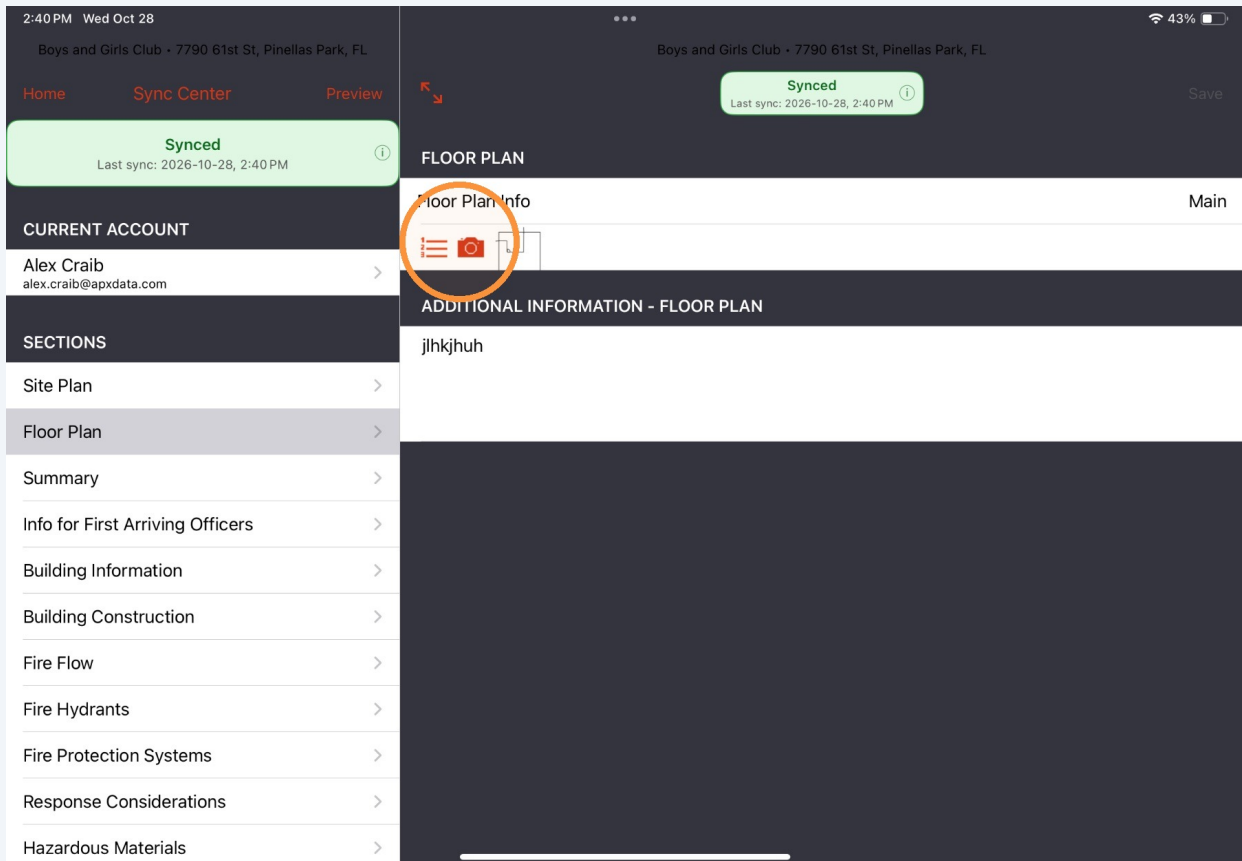

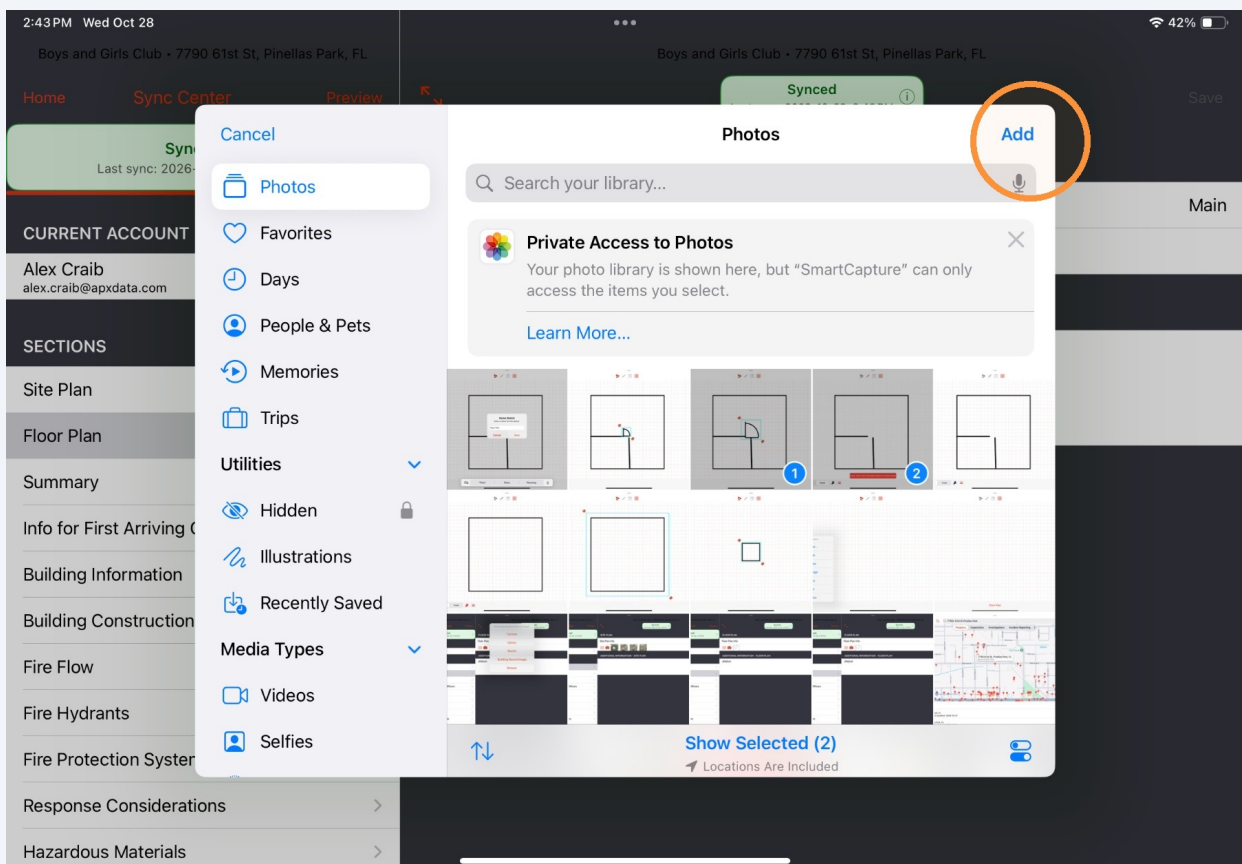

Select the section of the preplan with the floor plan field. In this example, it is in the Floor Plan section.

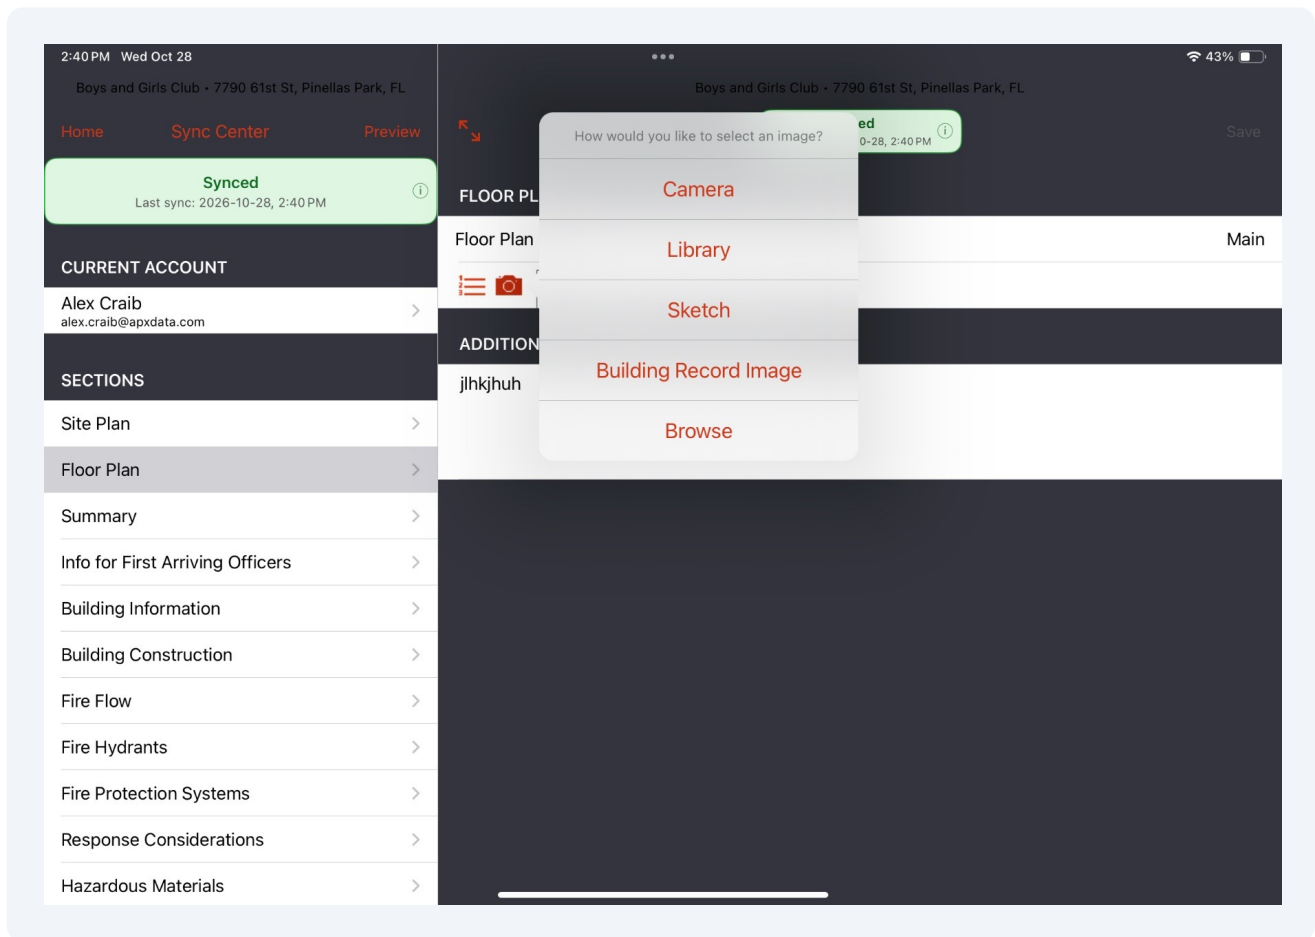

3

Select the Camera button. Depending on how the floor plan is being added, complete the following:

1. To take a picture of a floor plan, select **Camera**.
2. To upload an existing floor plan image file, select **Library** or **Browse**.
3. To sketch a floor plan within the app, select **Sketch**.

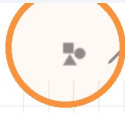

4

If **Sketch** is selected, the user will be presented a blank canvas with a grid that can be toggled on and off. Annotations can be added to this blank canvas, including symbols, shapes, and lines.

For more information on using these annotation tools, see SmartCapture iOS - Adding Annotations.
